

whiskers = 95% complex-clustered bootstrap CI (10,000 replicates, seed 20260803); filled mark = CI excludes zero.
 Δ SASA is the one cheap hotspot feature the matching does not control, so it is checked separately: the 384-pair tier carries a Δ SASA imbalance of +0.072 [+0.045, +0.100], and adjusting the gap for it moves it only -0.042 $\rightarrow$ -0.028 nats.
